SALVAVIDAS APP - HELP

Salvavidas is an application or early relief tool, that is, its use is aimed at improving our safety as individuals in different situations where we need help from a close contact.
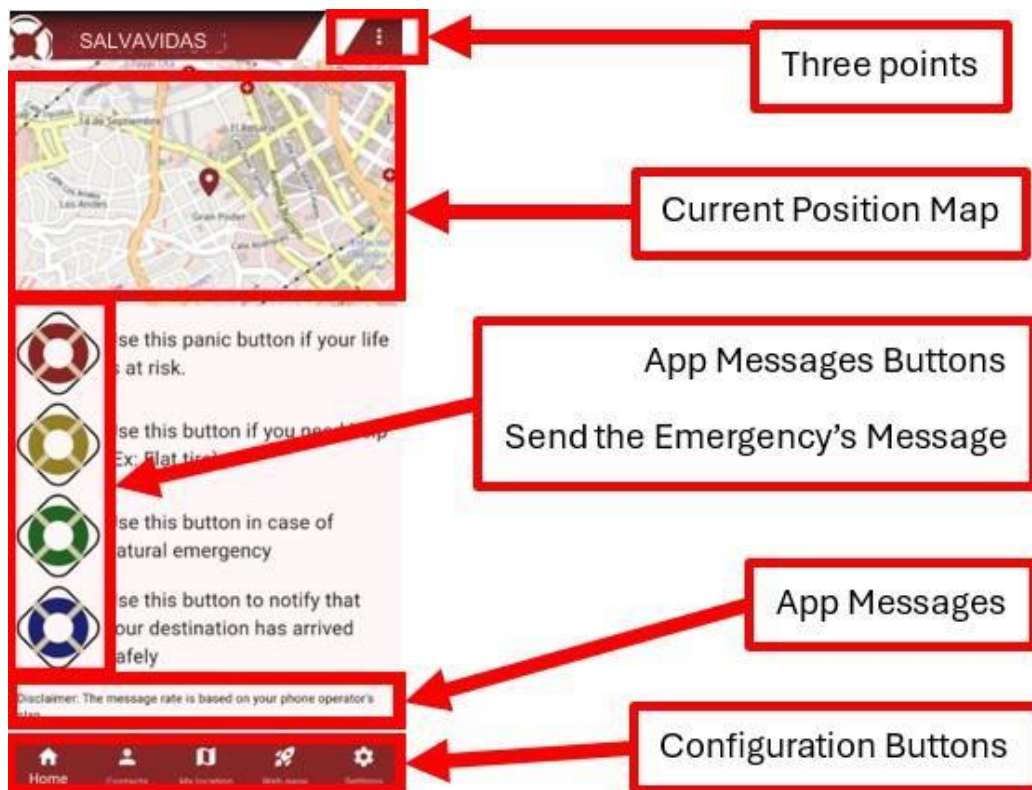

MODE OF USE

Google Login In

Salvavidas integrates with the Google account to synchronize with your contacts, WhatsApp account and the Google Maps app..

Salvavidas has four levels of early alert, divided into four colors or emergency buttons when pressing one of the four buttons you send a message to your contact with GPS coordinates and a help text corresponding to the button you pressed, this emergency message will arrive directly to a list of emergency contacts that I add to the application, this message will reach your emergency contact message box, the application is early alert.

Three poins button It is direct access to the settings and to the terms and conditions of the application

Buttons that send the emergency message

Red Lifesaver: This button aims to give an extreme warning message, i.e. that the user may be at risk and their physical integrity, for example they may be suffering assault, kidnapping, physical assaults or others of similar magnitude.

Yellow Lifesaver: This button aims to send an early relief warning message, that is, the user may have problems that need help from one of their contacts i.e. a mechanical car malfunction, lack of money, not finding a location and others similar to these cases.

Green Lifesaver: This button aims to alert the location and situation of the user in a natural disaster or social conflict present in the user's location.

Blue Lifesaver: This button aims at sending to your contacts the location of the user, this button is the only one that can configure your text in settings, This button can serve as an emergency button of an older adult or a teenager going to an event, in addition to being a more control mechanism for parents.

Start button:

Go to the home screen of the app

Contact button:

The contact button is for adding to your emergency contacts, this has no limit on your ability to add contacts with the exception that when sending the message it will be sent to all aggregated contacts and you have to take into account when using **the SMS option the message cost of the country's telecommunications company according to the plan contracted with your telephone operator.**

My location button:

It takes you as direct access to Google Maps location and coordinates
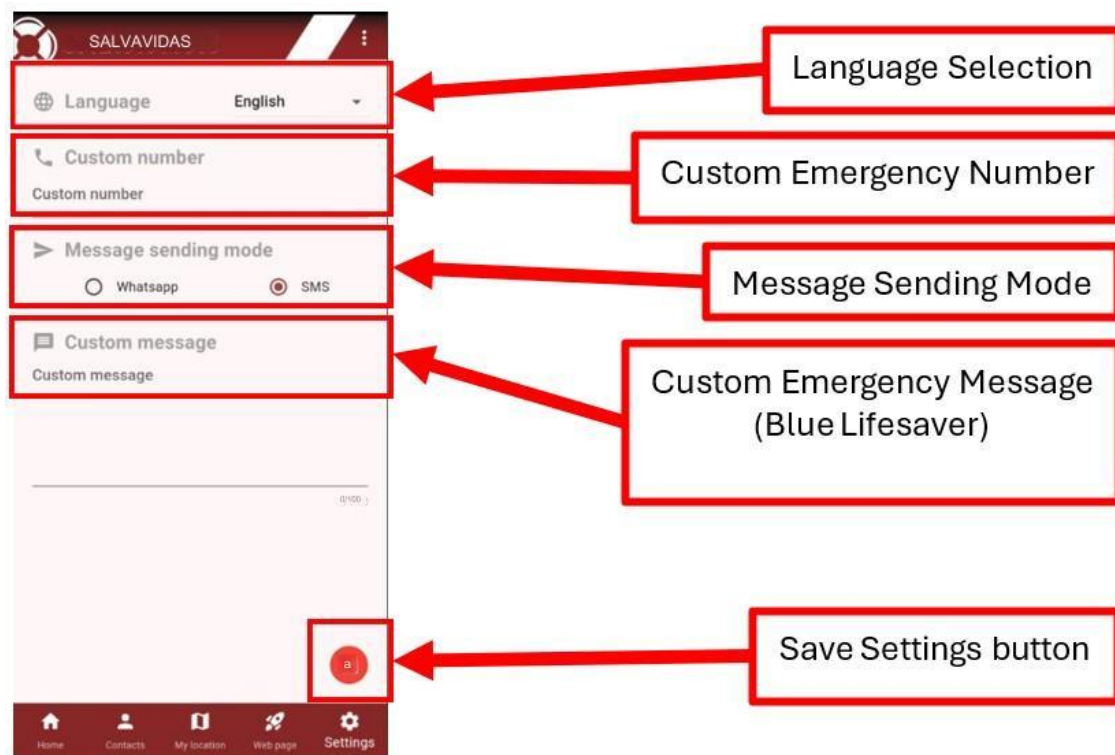

Sync button:

The sync button allows you to connect with a real panic button, its use is via Bluetooth and the device must be detected and configured previously by the user to allow use through the app.

Configuration button:

The configuration button, is the direct access to the configuration.

CONFIGURATION BUTTONS

Language Selection Currently the app has 14 languages to choose from, recommending in English and Spanish in case you do not find your language in the app.

Custom Emergency Number this option is to add a country emergency service member or the most trusted user contact, **this option works only with Red Lifesaver.**

Message mode his option allows the user to choose whether the message will be sent by SMS or WhatsApp (in the case of choosing the WhatsApp option you must additionally accept the sending of the message in the WhatsApp app)

Custom Emergency Message This option is to customize the **Blue Lifesaver** text according to the user's need.

Save Settings button This button saves the settings made, if the user does not save the modified settings, it remains unchanged.

From our service

The developers of the app are not responsible for misuse or instant messaging charges from telecommunications companies, it is good to remember that it is an application or early warning tool.
